Overview

Java Developer with over 4 years of experience building and modernizing resilient and scalable backend services using Java and Spring Boot. Experienced in microservices, reactive application development with Spring WebFlux, application migrations, system integrations, observability, performance testing, and cloud-native technologies.

Technical Skills

- **Languages:** Java, Python.
- **Database:** MySQL, H2, Cassandra.
- **Framework:** Spring Boot, Spring Webflux, JPA, Hibernate,
- **Supporting Skills:** Kafka, Azure, Maven, ELK, Hashi Corp Vault, Kubernetes, Docker, OpenShift, GitLab CI/Cd Pipeline, GitHub.
- **Web Technologies:** HTML, CSS, JavaScript.
- **Tools Used:** IntelliJ IDEA, Spring Tool Suite, Renovate SQL Developer, Git Bash, VS Code, Dynatrace, Grafana, Jira, Splunk, Postman, JMeter

Experience

Citi, Apps Dev Programmer Analyst | Pune Maharashtra

Dec 2024 – Present

- Developed and modernize backend services for the ACS (Appian Computing Solution) platform enabling the automation and remediation of EUC (End User Computing) processes while contributing to security remediation, technology upgrades and adoption of engineering productivity tools.

Persistent Systems, Senior Software Engineer | Pune, Maharashtra

June 2024 – Nov 2024

- Focused on ensuring the development of resilient and scalable solutions. Managed and executed application migration projects, ensuring smooth transitions with minimal downtime. Worked on creating the dashboard with Dynatrace for end-to-end Monitoring and Grafana for extract insights using Splunk queries

Persistent Systems, Software Engineer | Pune, Maharashtra

June 2022 - June 2024

- Worked on building applications using Java and Spring Boot, ensuring development of resilient and scalable solutions Enhanced and added features to pre-built applications, improving functionality and performance. Resolved UAT and Production issues, ensuring seamless deployment. Additionally, fix the vulnerabilities, implemented Proof of Concepts (POCs) for multiple clients, demonstrating the technical feasibility and business value of leveraging new technologies.

Persistent Systems Internship, Software Engineer Intern | Pune, Maharashtra

Jan 2022 - June 2022

- During my internship, acquired proficiency in Java, Spring Boot, Git, Object-Oriented Programming, SQL, HTML, CSS, JavaScript, and gained exposure to cloud technologies. Played a key role in an industry Proof of Concept (POC) for Constellation Brands, leveraging the CKAN tool for efficient dataset management and version control

Project Experience

1. ACS Platform

Dec 2024 – Present

A platform that enables users to remediate the EUC process previously managed through manual excel spreadsheets, providing an intuitive and compliant user interface that enhances compliance controls and risk management.

Technologies & Tools Used: - Appian, Java, Spring Boot, Oracle, GitHub, Kibana, lightspeed, Harness, Devin, renovate, Jmeter

- Contributed to application modernization and migration initiatives, including OpenShift cluster migration, Spring Boot migration, and Tomcat 10 migration for VM-based components, leveraged Open Rewrite and Code Bot for the Spring Boot migration and performed comprehensive testing to validate compatibility and stability
- Designed and developed a new scalable application using Spring Web Flux's reactive programming model as part of the integration between the ACS platform and FINSAP Bridge, automating data-related activities and reducing manual intervention. The service fetches data from FINSAP Bridge, generates and uploads files to S3, and sends callbacks to Appian, eliminating the need for users to manually upload files.
- Developed production-grade services to integrate the ACS platform with the Data Quality framework, a generic framework for validating data quality before ingestion into downstream Citi applications. Implemented services for feed metadata and rules configuration and a separate service for feed creation and execution initiation.
- Developed a reusable header-uplift utility that can be executed locally to generate data in the required template by reading the acs database configuration and file-related details along with the provided header mappings, simplifying and standardizing the header uplift process.
- Contributed to the adoption and integration of engineering productivity tools, including Renovate Devin and Stylus, as part of ongoing technology Modernization and development-process enhancements
- Contributed to technical enhancements and remediation activities, including VA issue fixes, CVM vulnerability remediation, major and minor feature stories, Proofs of Concept (POCs), and technical spikes

2. Support Assist Cloud

June 2023 - Dec 2024

A product for Dell users that enhances the user experience by managing driver updates, performing virus scans, maintaining device and user information. It impacts millions of users worldwide.

Technologies Used: - Java, Spring Boot, MySQL, Azure, GitLab, CI/CD, Splunk, Dynatrace, Maven, Kafka, ECS, Docker, K8s, Vault.

- Design the service from scratch which reads the data from the Kafka and then done the processing based on enqueue time and inserts it into the database in batches. This application is going to handle a very huge data around **30 million** records. Also, it handles other scenario like if the db is down or if any other exception occurs then no data should be loss. And analyzing the performance.
- Led the migration of services from Azure to Dell Digital Cloud which saves cost around **50%**. Also Deployed services on multiple platforms including PCF (Pivotal Cloud Foundry), KOB (Kubernetes on Bare metal), and Kubernetes.
- Addressed Black Duck vulnerabilities in services to ensure security compliance. Worked on JUnit test cases to improve code quality and test coverage. Also Onboarded the IoT Hub and optimized costs by **15%** through daily message limit calculation and updates for

- campaigns. Apart from it maintained the GitLab CI/CD pipeline within the project and provided guidance to fellow team members on Kafka.
- Integrated and created monitoring dashboards using Azure, Dynatrace, and Grafana. And Utilized Splunk for log aggregation and analysis.

3. Service Modernization-Lab Services

March 2023-June 2023

Product for mid-tier retailers to analyze customer behavior on the basis of previous purchase patterns, create certain scores and process them further to generate weekly, bi-weekly and monthly replenishment carts.

Technologies Used: - Python, Flask, Cassandra, Azure.

- Created APIs to facilitate file uploading, downloading, and viewing functionalities integrated with Azure Blob Storage.
- Developed additional APIs for managing product, store, and user details, enabling data retrieval and storage from Cassandra.
- Crafted and revised Python test cases to validate the business logic effectively.

4. Supply chain Management System

November 2022-March 2023

Designed and developed a web application to oversee clinic operations, patient management, inventory ordering, and shipping logistics. Additionally, orchestrated the supply chain for medical products.

Technologies Used: - Java, Spring Boot, Maven, Hibernate, MySQL, GitHub, Git Bash, key cloak.

- Built Restful APIs for executing CRUD operations on entities such as users, clinics, and patients. Additionally, create APIs to deliver processed data to the user interface by retrieving and manipulating information from multiple tables, employing Hibernate, MySQL, and JPQL queries for data retrieval.
- Executed the implementation of file upload and download capabilities enabling patients to both upload and download their reports effectively.
- Implemented JWT authentication for users along with role-based authentication. and incorporated Key cloak for authentication.

Education

Bachelor of Technology in Computer Science and Engineering

June 2018-May 2022

Madhav Institute of Technology and Science, Gwalior

CGPA: 8.6

Certifications
